

Spatial Channel Models and Evaluated Parameters

The following table outlines the specific spatial channel models utilized in the simulation, along with their respective control parameters and evaluated structural cases.

Model Name	Control Parameter / Variable	Evaluated Values / Structural Cases
One-Ring Model	Angular Spread (ϕ)	[0.5, 2, 5, 10, 20, 40, 60]
Saleh-Valenzuela (SV)	Number of Clusters	[1, 2, 3, 5, 8]
QuaDRiGa Model	Control Parameter (Clusters)	[2, 4, 6, 8, 10]
Weichselberger	Case 1 (Low Rank) Case 2 (Diagonally Dominant Profile) Case 3 (Decoupled Exponential Decline) Case 4 (Full Rank)	$\Omega(i,j) = 0 \text{ (} i, j \neq 4 \text{)}$ $\Omega(i,j) = 0 \text{ (} i \neq j \text{)}$ $e^{-\alpha i-j }$ Every $\Omega(i,j)$ is roughly Equal
